## Abstract

At the request of ATC Associates, Inc. (ATC), the Glenn A. Black Laboratory of Archaeology, Indiana University (GBL) conducted a Phase Ia archaeological reconnaissance survey of the proposed location for a cellular communications tower construction site southeast of Owensboro, Daviess County, Kentucky.

The purposes of the survey were 1) to identify and document all of the cultural resources in the project area, 2) to evaluate any sites found with regard to their eligibility for inclusion on the National Register of Historic Places (NRHP), and/or historic registers in Kentucky, and 3) to make recommendations for the protection of significant and potentially significant cultural resources.

No cultural materials were discovered during survey. No further archaeological work is recommended for the currently proposed project area. Cultural resource clearance is therefore recommended for construction of the proposed cellular communications tower and its associated access road, provided that all earth-moving activities are restricted to the currently delineated project area boundaries.
